

STEM PROJECTS FOR MAY

WEEK 1

Water is important. Our bodies need water to stay healthy. It's important for us to drink water and it's always fun to drink through a straw. Does celery remind you of a straw? If we had a celery stick, could water go through it? If we look closely we can see tiny holes at the end. Can water travel through those tiny holes?

WEEK 2

Can you hear the birds chirp? What would make birds want to come visit more often? What if we created a bird feeder out of supplies? What would happen?

WEEK 3

Worms are wiggly and jiggy! They slither and slide as we watch them in the dirt. Could we make gummy worms wiggle without touching them? What if we mixed together some items in the kitchen like baking soda and vinegar?

WEEK 4

Plants are living things but how do they breathe? To help us understand our teacher will take a leaf from a tree and put it under some water. We will then place it in the sunlight. What will we see while we wait and watch?
